#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Allowable Subject Matter***

Claim 16 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-15,17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bolger. This patent discloses the ball milling of metal powder to form metal flakes in the presence of polytetrafluoroethylene and a stearic acid. Zinc is a well known metal powder. Thus, it would have been obvious for one of ordinary skill in the art to modify Bolger by treating zinc powder since zinc is a well known metal powder. The remaining limitations would then have been obvious design choices as they solve no stated problems. For example, the amounts of each material used would have been obvious based on routine experimentation and the desired final product. Also, lithium stearate is a well known stearic acid and its use within the process would have been obvious once it was known to use a stearic acid as in Bolger. Note for claim 10 the powder is still not being positively claimed, as it is in claim 16.
